Reflection · Task orientation

Confidential document · For the exclusive use of the recipient · DISC — Marston (1928)

Welcome

What you're holding is not a test. It's a mirror.

DISC doesn't measure how intelligent you are, how good you are at your job, or what kind of person you should be. It measures something simpler and more useful: how you behave. How you move through the world, how you communicate, how you react under pressure, how you make decisions. Observable behaviours — not judgements, not permanent labels.

The tool was developed from the research of William Moulton Marston, an American psychologist who in 1928 published *Emotions of Normal People* — a pioneering work on human behaviour under normal, non-pathological conditions. Since then the model has been developed, validated and applied in business, education and coaching contexts worldwide. Today more than 50 million people have completed a DISC assessment.

How the model works

DISC reads behaviour along two fundamental axes.

The first axis is about pace: some people act with speed, assertiveness and directness — others prefer to reflect, evaluate, and proceed with care. Neither is wrong: they are simply different ways of processing the world.

The second axis is about orientation: some people focus their attention on tasks, results and objectives — others focus on people, relationships and climate. Again, there is no universally right choice: there is only the one that comes most naturally to you.

The intersection of these two axes produces the four DISC styles.

The four styles

D — Dominance · Direct, decisive, results-oriented. Gets straight to the point, embraces challenges, and finds competition energising. Acts before analysing.

i — Influence · Enthusiastic, communicative, optimistic. Puts people first, leads with energy, and brings others along without them even noticing.

S — Steadiness · Patient, reliable, loyal. Prefers to build over time rather than act on impulse. The glue in any team — always someone you can count on.

C — Conscientiousness · Precise, analytical, methodical. Wants to understand before acting. Quality isn't a goal — it's a non-negotiable standard.

"None of these styles is better than the others. Each brings something the others don't. And all four live in you — in different proportions."

How to read this report

This report is built on a simple idea: you are one person, but you behave differently depending on the context you find yourself in. Not because you are inconsistent — because you are human.

The Natural Profile — who you are when you're not thinking about it

This is your most authentic style. The one that surfaces when your guard comes down, when you are at ease, when you are not playing any particular role. It isn't fixed forever, but it is your starting point — the way you are wired. You will find this profile in the first pages of the report, alongside a narrative that tries to give you a recognisable picture of yourself.

The Adapted Profile — how you present yourself to the world

This is the behaviour you express in your current working context. It is not a mask — it is your natural capacity to respond to what your environment requires. Sometimes the adapted profile closely resembles the natural one. Sometimes it diverges. Both are meaningful, and this report helps you read them.

The change page — what happens between the two

The distance between your natural profile and your adapted profile says something important: how much energy you are investing in adaptation. When the distance is small, your natural style works well in your current context. When it is large, it is worth asking whether you are sustaining an effort that could cost you something over time.

The reference tables

In the final pages you will find six reference tables — quick-read tools showing how your profile expresses itself under stress, in relationships with other styles, in decision-making and in feedback. They are designed to be consulted, not read in sequence.

"Read this report with curiosity, not with the desire to confirm what you already think about yourself. The most useful things are often the ones that surprise you."

Results for Pippo Baudi

Natural Profile (LESS) — who you are authentically · Adapted Profile (MORE) — how you present yourself at work

NATURAL PROFILE (LESS)

CI The Teacher

The one who verifies everything with rigour and communicates it with clarity and elegance

I · Natural Profile

Reading the graph
Each bar shows the intensity of one dimension in your natural profile, on a scale from 0 to 100. Dimensions that exceed 50 are active — they define your behavioural archetype and guide your spontaneous style. The higher the value, the more that dimension characterises your natural way of moving through the world.

ADAPTED PROFILE (MORE)

IS The Connector

The one who brings warmth, lightness and connection everywhere, with constancy

II · Adapted Profile

Reading the graph
The bars show how you behave in your current working context. Compare them with the natural profile: where the values are similar, your spontaneous style aligns with what your context requires. Where they diverge, you are operating a conscious or unconscious adjustment — and that distance has an energy cost worth knowing about.

DISC

The Four DISC Styles

Primary colour of Pippo Baudi: **Conformity (C)** · The Teacher

On this page you will find the key characteristics of the 4 main DISC profiles. Your primary color is highlighted. In the following pages of this report you will discover your detailed profile – natural and adapted – which may consist of a single color or a combination of colors.

D Dominance

Red

Channels energy towards results. Direct, decisive, action-oriented and autonomous.

SPEED RESULTS COURAGE AUTONOMY CHANGE

46

I Influence

Yellow

Channels energy towards relationships. Enthusiastic, expressive, persuasive and people-oriented.

ENTHUSIASM OPTIMISM CREATIVITY RELATIONSHIPS
COMMUNICATION

67

S Steadiness

Green

Channels energy towards stability. Patient, reliable, empathetic and cooperation-oriented.

PACE EMPATHY LISTENING STEADINESS
SUPPORT

47

C Conformity

Blue

Primary

Channels energy towards quality. Precise, analytical, methodical and process-oriented.

METHOD PRECISION ANALYSIS PRINCIPLES
QUALITY

90

The score indicates the intensity of each dimension in the Natural Profile (scale 0–100). Dimensions exceeding 50% define the active profile and contribute to the behavioural archetype.

Personal Profile: The Teacher (CI)

CI

Your Natural Profile

When you completed the questionnaire, you were asked to choose — within each group of words — the one that represented you most and the one that represented you least. This second choice — the Least — is what generated your Natural Profile.

The reason is psychological, and it is worth understanding. What you know with certainty you are not, what you instinctively reject, is far more stable and difficult to alter than what you think you are. Negative preferences are deeply rooted — your external environment, others' expectations, the role you hold: none of these can easily shift them. This is why they offer a more reliable window into your authentic style.

What you read in this section is your behaviour when you are not playing any role: when you are completely at ease, in your comfort zone — or, paradoxically, when you are under intense pressure and your mental defences fall away. In both cases, what emerges is who you really are.

The Teacher

You need things to be done well — and you need someone to notice. These are not two separate needs. They are the same thing, seen from different angles. The care you put into your work is not only rigour: it is the silent preparation before going on stage. You study, verify, build something unassailable — because you know you will then expose yourself. And when you do, you want no one to find the flaw.

What you look for is complete recognition: not just to be appreciated as a likeable person, not just to be respected as an expert — both things together, at the same moment. When you manage to present something complex in a clear, engaging, precise way, and you see that people follow you and respect you for what you said — that is where you are in your element. That is where your two sides stop pulling against each other and row in the same direction.

Your engine is credibility with style. Knowing isn't enough — you want to be able to communicate what you know. Being liked isn't enough — you want to be taken seriously. You are a natural speaker who prepares like an academic, an analyst who knows how to hold a room. This combination is rare and powerful. When it works, you are hard to match.

But the two natures that make you up have opposing demands that coexist every day — they don't take turns. The C in you wants silence, depth, time to analyse without being interrupted. It needs to sit alone with the problem until it has truly understood it. The i in you wants movement, contact, immediate feedback, the sense that something is happening. It hates isolation. These two drives don't wait for each other — they overlap, contradict, ask different things of you at the same moment. The result, sometimes, is a kind of internal tension difficult to explain to others: you are exhausted by solitude and exhausted by crowds, almost simultaneously.

NATURAL PROFILE

Personal Profile: The Teacher (CI)

Under pressure this tension becomes visible. You can become excessively verbose — you talk, explain, justify, seek confirmation — while inside you are still processing something you haven't finished understanding. Or you disappear into analysis, stop communicating, and those who were expecting you no longer know where you are. There is no fixed mode: it depends on which nature takes command at the wrong moment.

There is also another vulnerability worth looking at. The need to maintain credibility — not to be wrong in public, not to appear unprepared, to control how you are perceived — can become a silent weight. You avoid exposing yourself on things you don't fully master. You struggle to accept criticism of your work — not because you are fragile, but because that work is also your image. And when someone questions the quality of what you have produced, it feels as though they are questioning you.

Others see you as versatile and brilliant — capable of moving between the technical and the relational with a fluency few people have. They seek you out to present difficult things, to communicate externally, to hold rigour and engagement together. But sometimes they find you unpredictable: focused and precise in some moments, scattered or needing attention in others. It isn't inconsistency — it is your complexity surfacing.

Where you give your best is when your two natures align on a shared objective: communicating something important in a way that truly lands. A presentation that must convince and cannot afford errors. An audience to win over with both competence and warmth. A moment where someone is needed who knows both what to say and how to say it. There the tension you carry inside becomes energy. And those watching finally understand why that meticulous preparation and that desire for the stage don't contradict each other — they feed each other.

Strengths	Areas of attention
- Combines analytical depth with the ability to communicate with impact - Prepares with rigour and then puts himself out there with confidence - Makes even the most complex content accessible and engaging - Credible on the technical level and convincing on the relational one - Excels in roles requiring expert communication and presence	- Lives a constant internal tension between the need for solitude and for contact - Under pressure oscillates between excessive verbosity and retreat into analysis - Struggles to accept criticism of his work because he experiences it as criticism of himself - The need to appear unassailable can limit risk-taking and spontaneity - Can seem unpredictable in style depending on which nature takes command

Adapted Profile: The Connector (IS)

IS

Your Adapted Profile

The Most choice — the words you selected as most similar to you — generated your Adapted Profile.

Here too the mechanism is psychological. When you choose what resembles you most, your mind is not working in a vacuum: it inevitably takes into account the context you are in, the expectations of your working environment, and how you believe you need to be in order to succeed or be accepted in your role. This is not a distortion — it is a natural and intelligent form of adaptation. But it has a cost.

What you read in this section is your public self: how you present yourself to others, how you adjust your behaviour in response to what your context requires. Operating consistently in this profile takes conscious energy. The further it is from your Natural Profile, the more significant that effort — and the more worth knowing about.

The Connector

In a working context the iS is the one who holds the group together without anyone having nominated this as his role. He notices when someone is struggling, knows how to lighten a tense moment, remembers that the project is not only the deliverable but also the people working on it. He doesn't do it in a showy way — it is simply his natural way of being in a professional environment.

To the team he brings warmth, relational continuity and a listening ability rarely found in someone who also has a strong influencing component. He isn't only empathetic — he is also engaging. He knows how to motivate through genuine recognition, how to create a climate where people want to do well not out of fear but out of belonging. In team-building contexts and during onboarding or relational crisis phases, he is the profile who repairs the damage others don't see.

He struggles in environments that require firm, public positions on divisive issues. His need to maintain good relationships with everyone leads him to avoid clear-cut stances, to smooth over conflicts instead of resolving them, to please everyone rather than choose. In contexts where leadership requires upsetting someone to move forward, this adaptation comes at a real cost: the group feels leaderless in the moments it needs one most.

The signal to watch is his ability to manage dissent without smothering it. An iS who functions well in a working context creates a climate where people feel safe enough to bring difficult things — and he addresses them. An iS under adaptive pressure creates a pleasant climate where no one says the difficult things — because they already know they will be smoothed over.

ADAPTED PROFILE

Adapted Profile: The Connector (IS)

Strengths

- Builds genuine connections and warms the environment naturally
- Holds the group together with warmth and energy
- Motivates and engages with authentic enthusiasm
- Makes collaborative contexts more pleasant and productive
- Excels in roles where the human factor is decisive

Areas of attention

- Avoids uncomfortable positions to protect others' approval
- Under pressure lets the group's emotions influence his decisions
- Struggles to be direct when he risks upsetting someone
- Can be seen as unreliable in moments requiring firmness
- Needs to feel appreciated to give his best

Score Details

Score details for Pippo Baudi

Natural Profile (Internal)

D · 46 — The drive to achieve personal goals and assertiveness are not particularly defining traits in your style. You can assert yourself when needed, but not with the same intensity as more control-oriented profiles. You tend to give space to those who show greater determination.

I · 67 — You tend to be open and positive in your interactions with others, building easy-going relationships. This is not, however, the most defining feature of your style. You are perfectly capable of working independently, without relying on others' input, when the situation demands it.

S · 47 — Pace and perseverance are not strongly defining features of your style. You are neither particularly dynamic and reactive nor particularly patient and reflective. Depending on what is needed, you can maintain a steady approach or adapt with relative ease.

C · 90 — Your natural need for order and structure is particularly high. This drives you to pay close attention to detail and to seek precision in what you do. You have a clear understanding of others' expectations and tend to operate within well-defined boundaries.

Adapted Profile (External)

D · 45 — Assertiveness and competitive behaviour are not defining features of your current working style. You can assert your position when necessary, but dominance is not a central characteristic in your current context.

I · 72 — You approach your work with an open and warm attitude, making yourself easily accessible to others. You have a strong ability to build solid interpersonal relationships — a valuable asset in fostering cohesion and motivation in your context.

S · 54 — Your working pace sits at mid-range values. You show neither particular urgency nor flexibility, nor a marked patience or perseverance. You are likely to adapt to either approach, depending on the demands of your role.

C · 27 — You present yourself as someone capable of reaching independent conclusions and following your own preferences, rather than conforming to highly structured working conditions. A degree of independence runs through your current style.

Adaptations, stress index and change model for each dimension

When the behavior required by the environment (Adapted) is very different from natural inclinations (Natural), the person must make a cognitive and emotional effort — the Adaptation Tension. It can manifest as an upward shift (Amplification), when the environment requires exaggerating a characteristic not naturally possessed, or as a downward shift (Suppression), when a natural instinct must be hidden or restrained.

ADAPTATION DELTA

D	-1	45% → 46%
I	+5	72% → 67%
S	+7	54% → 47%
C	-63	27% → 90%

ADAPTIVE STRESS INDEX

Stress Index (range 0–100)

Stress and Change

Change Model

D · -1 — Your levels of assertiveness and proactivity appear consistent with your natural style. You don't feel the need to modify them based on your current situation: you are showing neither more nor less determination than you would in your spontaneous expression.

I · +5 — Your level of communicative openness shows little or no variation from your natural style. You feel neither overly expansive nor too reserved in your current working conditions — the way you relate to others aligns with what your context requires.

S · +7 — Your natural working pace appears well suited to the demands of your current situation. You don't feel the need to be more or less reflective or patient than comes naturally — there is coherence between who you are and what your context requires.

C · -63 — Your profile shows less attention to analysis and precision than you would naturally prefer. Your current role calls for a more autonomous and less procedural approach than your natural style. It is worth considering whether this adaptation is costing you energy over time.

Reference Tables

01 — DISC and Stress

Under pressure, each of us reveals something authentic. Defense mechanisms activate, conscious control decreases, and behaviors become more predictable — for better or worse. This table describes how each style manifests in difficult moments: not to judge, but to recognize. Often the first step toward not amplifying someone else's stress is simply knowing what they need in that moment.

How the four dimensions manifest under pressure

Situation	D · Red	I · Yellow	S · Green	C · Blue
Primary reaction	Becomes more aggressive and controlling	Becomes hyperactive and scattered	Stiffens and resists change	Becomes hyper-critical and paralysed by analysis
Visible signal	Raised voice, hasty decisions	Talks too much, gets distracted	Silence, withdrawal, passivity	Exaggerated perfectionism, freeze
Need under stress	Control and quick results	Recognition and connection	Stability and predictability	Time, data and clarity
Effective strategy	Give clear objectives and autonomy	Involve and acknowledge them	Reassure and give them time	Provide structure and complete information
Relational risk	Overwhelms others with urgency	Over-promises, disappoints	Avoids necessary confrontation	Blocks the group with perfectionism

Recognising another person's stress signal is the first step to not amplifying it.

02 — DISC and Client

Every person has a different way of evaluating, deciding and trusting. Adapting your approach does not mean changing who you are — it means choosing how to present yourself so your message truly lands. This table offers a practical guide for tuning in to the style of whoever is in front of you, from first contact to closing.

How to adapt the commercial relationship to the four styles

Dimension	D · Red	I · Yellow	S · Green	C · Blue
What they want	Quick results, control	Enthusiasm, relationship, novelty	Continuity, trust, support	Data, precision, guarantees
How they decide	Independently and fast	On the enthusiasm of the moment	Slowly, with consensus	Through in-depth analysis
How to present	Direct, concise, ROI-oriented	Warm, creative, tell stories	Patient, reliable, build trust	Precise, documented, professional
Mistake to avoid	Wasting time chatting	Being cold or bureaucratic	Pushing too hard or changing plan	Being vague or approximate
Key to closing	Concrete value and speed	Vision and personal relationship	Reassurance and references	Evidence, case studies, guarantees

No style is easier to manage — each requires a different approach.

Reference Tables

03 — DISC and Team

Diversity of styles in a group is an asset — but only when it is understood. Each DISC dimension brings a specific contribution to collective work, and generates equally specific tensions with opposing styles. Understanding these dynamics helps leverage what each person does best and turn differences into complementarity rather than friction.

Contributions and tensions of the four styles in teamwork

Dimension	D · Red	I · Yellow	S · Green	C · Blue
Main contribution	Direction and decision	Energy and connection	Consistency and support	Quality and analysis
Natural role	Driver, task leader	Energiser, networker	Facilitator, mediator	Expert, quality controller
Comfort zone	Challenges and quick results	Brainstorming and relationships	Routine and long projects	Analysis and verification
Typical tension	With S (too slow) and C (too cautious)	With C (too rigid) and D (too cold)	With D (too aggressive) and I (too chaotic)	With I (too superficial) and D (too impulsive)
How to empower	Give ownership and ambitious goals	Give visibility and creative freedom	Give stability and recognition	Give time and clear standards

An effective team is not made of identical profiles — but of profiles that understand each other.

04 — DISC and Decisions

Faced with a difficult choice, each person activates their own process: some decide in seconds based on the goal, others follow intuition, others wait for group consensus, others gather data as long as they can. No approach is wrong — but each has its blind spots. This table helps understand how to accelerate or support another person's decision-making process without forcing it.

How the four styles face choices and uncertainty

Dimension	D · Red	I · Yellow	S · Green	C · Blue
Decision speed	Fast, instinctive	Fast, emotional	Slow, consensus-based	Slow, analytical
Bases decision on	Objectives and results	Intuition and relationships	Precedents and stability	Data and procedures
Typical risk	Impulsiveness without enough data	Overvaluing enthusiasm	Paralysis waiting for consensus	Analysis paralysis
In ambiguous situations	Decides anyway and corrects	Improvises following instinct	Waits for the situation to clarify	Gathers as much data as possible
How to support	Provide concise data and urgency	Involve and value the idea	Reassure and build gradually	Provide a framework and time

Speed is not always a virtue — nor slowness a fault.

Reference Tables

05 — DISC and Feedback

Feedback is one of the most powerful tools for growth — and one of the easiest to get wrong. Not for lack of good intentions, but because it is often given in the way the speaker would want to receive it, not in the way the listener can actually absorb it. This table shows how to adjust tone, structure and timing of feedback based on the style of whoever is receiving it.

How to give and receive feedback effectively for each style

Dimension	D · Red	I · Yellow	S · Green	C · Blue
How to give feedback	Direct, specific, action-oriented	Warm, appreciative, then the point	Gradual, private, gentle	Structured, documented, logical
What they appreciate	Honesty and concreteness	Recognition and positive vision	Continuity and respect for pace	Precision, evidence, consistency
What blocks them	Vagueness and time-wasting	Public criticism or coldness	Blunt confrontation and surprises	Approximation and lack of data
How they receive it	Integrates if useful, ignores if vague	Emotionally, then processes	Internalises slowly	Analyses, verifies, then responds
Key	Be direct without being brutal	Appreciate before correcting	Create a safe, private space	Document and give time to process

Effective feedback speaks the language of the receiver, not the giver.

06 — Reading Others

Before a person even speaks, they are already communicating. Posture, the rhythm of their voice, the type of questions they ask, their reaction to silence — these are all signals of the underlying behavioral style. This table is an exercise in observation: not to label, but to better understand who you are dealing with and consciously choose how to engage.

Behavioural signals to recognise the DISC style of a counterpart

Signal	D · Red	I · Yellow	S · Green	C · Blue
Communication	Direct, brief, assertive	Expressive, narrative, enthusiastic	Measured, calm, reflective	Precise, formal, documented
Posture	Forward, decisive, strong eye contact	Open, animated, gestures	Reserved, welcoming, active listening	Contained, controlled, attentive
Conversation pace	Fast, interrupts, gets to the point	Fast, digresses, engages	Slow, listens at length, weighs words	Slow, asks precise questions, verifies
Discomfort signal	Gets irritated, ends the conversation	Gets distracted, changes topic	Withdraws, becomes monosyllabic	Stiffens, asks for more data
Interested in	Results, efficiency, power	People, stories, possibilities	Relationships, stability, community	Processes, data, standards

Reading others is not manipulation — it is respect for their diversity.

This report is confidential. It has been generated exclusively for the personal use of
the recipient.
